

VERSE is the reward and utility token for the Bitcoin.com ecosystem.

VERSE aims at solving crypto's biggest challenge: onboarding new users to self-custodial and decentralized tools. We believe that the custodial model goes against the core principles of crypto by restricting economic freedom and exposing people to systemic counterparty risks.

Our strategy is to encourage more users to switch to self-custodial offerings, and VERSE is a key part of that. By providing incentives for people to use our products and services, we make the transition away from centralized exchanges more appealing and accessible to all.
